

# Weekly Progress Report - 03

## AmarCure

An AI Based Healthcare System

### Features Implemented (Previous Week) -

| Section        | Details                                                                    |
|----------------|----------------------------------------------------------------------------|
| Landing Page   | The main landing page of the AmarCure system was designed and implemented. |
| Login Page     | The user login interface and login functionality were implemented.         |
| Dashboard Page | The main user dashboard and navigation options were implemented.           |

### Features Implemented (This Week) -

| Section            | Module                         | Details                                                                                                                                        |
|--------------------|--------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------|
| Report             | Medical Report Management      | Users can upload medical reports in PDF or image format and store them in the system.                                                          |
|                    | Report Viewing                 | Users can view their previously uploaded medical reports.                                                                                      |
|                    | Report Sharing                 | Users can generate a QR code and share a report through the local system.                                                                      |
|                    | Report Deletion                | Users can delete a report, and the report is removed from both the database and local file storage.                                            |
| Available Hospital | Location-Based Hospital Search | The system takes the user's permitted location and searches for nearby hospitals and healthcare facilities.                                    |
|                    | Emergency Healthcare Search    | Users can find hospitals, clinics, diagnostic centres, laboratories, doctors and health centres within 2 km, 3 km or 5 km for emergency needs. |
|                    | Hospital Information Display   | Nearby healthcare facilities are displayed with location name, distance, directions and available contact information.                         |
