

Weekly Progress Report - 04

AmarCure

An AI Based Healthcare System

Features Implemented (Previous Week) -

Section	Details
Report	Users can upload, view, share via QR code, and delete medical reports stored in the database and local file storage.
Available Hospital	The system uses the user's location to display nearby hospitals, clinics, and healthcare facilities within a 2 km, 3 km, or 5 km radius, complete with distance, directions, and contact information.

Features Implemented (This Week) -

Section	Module	Details
AI Insights	Interactive Body Model	Users can tap body parts to select where they have symptoms.
	Symptom Presets	Shows common symptoms and allows users to type their own symptoms
	Symptom Analysis	Checks symptoms and suggests possible causes and the right doctor.
	Doctor Finder	Finds nearby doctors based on the detected condition and location.
Profile	Personal Details	Automatically loads and allows users to update their personal information.
	Smart Health QR Pass	Displays a digital health pass containing important medical information
	Emergency SOS	Sends an emergency SOS alert with the user's live location.

Family Access	Family Member Management	Users can add, remove, and manage family members with different access level.
	Shared Health Profiles	Users can accept or decline invitations and view health profiles shared by family members.
	Emergency Access & QR Card	Users can access emergency medical information and generate a personal Emergency QR Card
